This pdf document was generated by me Colin Hinson from a Crown copyright document held at R.A.F. Henlow Signals Museum. It is presented here (for free) under the Open Government Licence (O.G.L.) and this pdf version of the document is my copyright (along with the Crown Copyright) in much the same way as a photograph would be.

The document should have been downloaded from my website <https://blunham.com/Radar>, or any mirror site named on that site. If you downloaded it from elsewhere, please let me know (particularly if you were charged for it). You can contact me via my Genuki email page: <https://www.genuki.org.uk/big/eng/YKS/various?recipient=colin>

You may not copy the file for onward transmission of the data nor attempt to make monetary gain by the use of these files. If you want someone else to have a copy of the file, point them at the website. (<https://blunham.com/Radar>). Please do not point them at the file itself as it may move or the site may be updated.

It should be noted that most of the pages are identifiable as having been processed by me.

I put a lot of time into producing these files which is why you are met with this page when you open the file.

In order to generate this file, I need to scan the pages, split the double pages and remove any edge marks such as punch holes, clean up the pages, set the relevant pages to be all the same size and alignment. I then run Omnipage (OCR) to generate the searchable text and then generate the pdf file.

Hopefully after all that, I end up with a presentable file. If you find missing pages, pages in the wrong order, anything else wrong with the file or simply want to make a comment, please drop me a line (see above).

It is my hope that you find the file of use to you personally – I know that I would have liked to have found some of these files years ago – they would have saved me a lot of time !

PREFACE
(Completely Revised)

The reference number of this publication was recoded from AP2463 (2nd Edition) to AP 116A-01 in March 1965 under AL.20, changed to AP 116A-0001 in Jan 1967 under AL.25 and finally amended to AP 116A-0001-1 in June 1971 under AL.29. No general revision of page captions has been undertaken but the code appears in place of the earlier AP reference on new or amended leaves issued subsequent to that date.

Below is given a list of associated indexes etc which may be of use when seeking a publication on a particular equipment, item or system. The "Guide to the allocation of codes" is particularly useful when applying for AP code numbers or tracing the (possible) basic code number of a coded publication (ie Teleprinters = 116M-03**). Regarding the publications listed below, AP113 Book 3 is an index of current four-figure AP numbers and Air Diagrams and AP113 Book 4 is an index of coded publications and Miniature Air Diagrams.

List of associated publications

AP113, Book 3	Catalogue of technical publications and air diagrams
AP113, Book 4	Catalogue of coded technical publications (and Min AD's)

AP117A-0103-1	Concise details of radio special-to-type test equipment

IMPORTANT NOTICE

In order to keep any index up to date it is most essential that ATP/G Coding be advised on Part 3 of the RD(A) Form 121 immediately the job is sent to print. If the publication number has been amended, say, from topic 1 to topic 13D or the publication title has been changed, this information should be conveyed to ATP/G on an RD(A) form 123. These forms 121 and 123, as well as the "Guide to the allocation of codes" can be obtained, through the usual channels, from:

Note...

1. AP100Z-0201 supersedes AP(N)1 which is obsolete

Section 1-0

GUIDE TO THE ALLOCATION OF CODES (GROUPS 116 AND 117)

The information contained in Sections 1-1 and 1-2 is a guide to the allocation of codes in the 116 and 117 group of publications. Group 116 deals with radio, television, line equipment and also their associated special-to-type test equipments. Group 117 contains information on general purpose test equipment for radio, radar and line equipments.

In order to determine the existence of a possible Air Publication, first look up the group and then the sub-group. For example, Siemens Teleprinter Type 100 equates to 116M group, 03 sub-group. By referring to AP 113, Book 4, the actual AP number published is found to be 116M-0328-1.

When applying for a new Air Publication code number in order to publish a book under the AP system, the applicant should again use the same process to determine the group and sub-group. The group, sub-group, proposed title of the book etc should be entered on an RDA Form 121 which is sent to MOD(PE), ATP/G Coding, Leatherhead Road, Chessington, Surrey KT9 2LT (Tele 01-397-5266, Extn 1307). One copy only is required. ATP/G Coding will allocate the full code number and it will be returned via ATP/E Clerical at RAE Farnborough. The routing of the form is shown below:-

This applies to applications for codes in the 116 and 117 groups only. Copies of RDA Form 121 can be obtained from the address previously mentioned.

Section 1-1

GROUP 116: RADIO AND LINE EQUIPMENT (AND ASSOCIATED
SPECIAL-TO-TYPE TEST EQUIPMENT)Note...

Special-to-type test sets and equipment are included in the same Class as the equipment(s) to which they relate. (They are normally either incorporated in the Publication for the equipment(s) or, if issued as a separate Publication, share the same Code 2nd-Element number (with distinguishing 3rd-Element Sub-Topic suffix); in this way, related equipment is linked in the same Publication Code family and so can be easily located and identified.) Note that, for separately-issued Publications on special-to-type test sets, Topic -3C is inapplicable.

Television land links are to be found in 116T-1600 Group.

In this Sub-group, each Main System of equipment is assigned a separate Class No. (i.e. -01, -02, etc.), in sequence.

When a Publication for an equipment Main System is an entity on its own, requiring no Sub-System books, "00" completes the 2nd Element of the Code No. (i.e. -0100-, -0200-, -0300-, etc.).

If, conversely, a Publication for an equipment Main System is to be accompanied by separate publications for its various Sub-Systems or individual equipments (i.e. that which comes within and forms part of the Main System), then the Item No. "01" completes the 2nd Element for the Main-System Publication and the remainder of the Class (i.e. Item No. "02", "03", "04", etc.) is available for the related Sub-System, or component, Publications.

NOTES ON AMERICAN EQUIPMENT NOMENCLATURE

This summary of the Joint Nomenclature System ("AN" System) for American Communication-electronic equipment is provided as an aid to understanding the classification of certain U.S. electronic equipment.

The system indicator "AN" signifies that the equipment designation was assigned under the Joint "AN" system; it does not necessarily mean that the Army, Navy or Air Force use the equipment. The "AN" nomenclature as assigned to complete sets of equipment consists of the letters "AN" followed by a solidus (oblique stroke) and then three identifying letters. The three code letters following the solidus provide a brief description of the equipment; the first letter is used to indicate the type of installation, the second letter gives the type of equipment and the third letter indicates the purpose of the equipment. The meanings of the code letters in the three positions are:-

First letter (Type of Installation)	Second letter (Type of equipment)	Third letter (Purpose of equipment)
A - Airborne	A - Invisible light	A - Auxiliary assemblies
B - Underwater mobile, submarine	B - Pigeon	B - Bombing
C - Air transportable	C - Carrier	C - Communications
D - Pilotless carrier	D - Radiac	D - Direction finder
F - Fixed	E - Nupac	E - Ejection and/or release
G - Ground	F - Photographic	G - Fire Control
K - Amphibious	G - Telegraph/Teletype	H - Recording
M - Ground, mobile	I - Interphone	L - Searchlight control
P - Pack or portable	J - Electro-mechanical	M - Maintenance and test assemblies
S - Water surface craft	K - Telemetering	N - Navigational aids
T - Ground, transportable	L - Countermeasures	Q - Special (or com- bination of purposes)
U - General utility	M - Meteorological	R - Receiving, passive detecting
V - Ground, vehicular	N - Sound in air	S - Detecting and/or range and bearing
W - Water surface and underwater	P - Radar	T - Transmitting
	Q - Sonar	W - Control
	R - Radio	X - Identification
	S - Special types	
	T - Telephone (wire)	
	V - Visual, and light	
	W - Armament	
	X - Facsimile	

A number following the letters indicates the model number of the equipment, and a letter after the model number indicates later modifications. Thus AN/ARR-6C would refer to the third modification of the sixth model of an airborne, radio, receiving equipment.

It should be noted that the "AN" system only applies to complete sets of equipments. For major units of equipments, reference has to be made to a "Table of Component Letters" which is too complex to include in this summary. Major units are designated by substituting the component letters (obtained from the Table of Component Letters) and the model number for the letters "AN", e.g. T51/ARQ-8 is Transmitter No.51 which is part of, or used with, an airborne, radio, special set No.8.

Section 4

NATO APPROVED LETTER BAND DESIGNATIONS

The table below lists the letter band designations as agreed by NATO with effect from 1/1/72.

Letter	Band	Channel (1)
	Frequency in MHz	Width MHz
A	0-250	25
B	250-500	25
C	500-1000	50
D	1000-2000	100
E	2000-3000	100
F	3000-4000	100
G	4000-6000	200
H	6000-8000	200
I	8000-10000	200
J	10000-20000	1000
K	20000-40000	2000
L	40000-60000	2000
M	60000-100000	4000

- Notes: (1) Each band is divided into 10 numbered channels with width as shown, e.g., "A5" = 100-125 MHz; "H7" = 7200-7400 MHz.
- (2) Exact frequency may be identified by defining the band, the channel (base or lowest frequency) and adding the MHz required, e.g., "D4 plus 15" = 1315 MHz.
- (3) The frequency band limits above are exactly as agreed by NATO. For intra-UK use the upper limit should be read as "up to but not including". This will ensure that specific frequencies are included in one band only and not in two as above, e.g.: -

Band A 0-249.999 MHz

B 250-499.999 MHz etc.

ALPHABETICAL INDEX

This Section lists all the available installations, equipments, units and sub-units—
together with individual items and subjects of general interest—forming part of the
Signals Communications, Radar, and Test, Equipments Air Publications and of the
Radio Air Diagrams.

The equipments are arranged in alphabetical order, and in numerical order of
Type or Mark except for those equipments whose variants would occupy too large
a space in the index. To alleviate congestion of the index, and to facilitate the search
for equipments listed, the details of certain equipments are removed from the body
of this Section and are given as Appendices of Section 2 of this Part; reference to the
appropriate Appendix for such an equipment is given in the “*Remarks*” column
of the index. A detailed list of Appendices is given on the “*Contents*” leaf at the
front of this Publication.

Readers are advised to refer to Part 1, Sect. 1 of this Publication for further
information on the make-up of this INDEX and its intended scope and use.

SECTION 2

APPENDICES

INTRODUCTION

This Section comprises only those equipments and their variant Types and/or Marks that would occupy too large a space if they were inserted as part of the alphabetical index in Part 1. The generic title of each equipment is, however, listed in its relative position in the alphabetical index and the appropriate Appendix for that equipment is quoted in the 'Remarks' column; for example, against 'Control Units' in the alphabetical index will be found '*Refer to Appendix C2*'.

As the number of entries for variants of any equipment listed in the alphabetical index becomes sufficiently large to warrant the action, the details of this equipment will be extracted from Sect. 1 and displayed as a separate, new, Appendix in this Sect. 2. Conversely, the details of an equipment published as a separate Appendix will be re-inserted in the alphabetical index should the number of variants be reduced to a suitably small amount and no significant increase in the number of variants is probable in the foreseeable future; the relevant Appendix in this Section will then be cancelled.

GROUND RADARS

Note . . .

Early versions of ground radar installations were known as Air Ministry Experimental Stations (abbreviated to AMES) in a numerical sequence of Types. For later equipments, the nomenclature was changed from AMES to RADAR but the same numerical sequence was retained. For convenience, this Appendix lists the ground radar equipments (whether AMES or RADAR) in numerical order of Type, and of Mark as appropriate.
